KEY FEATURES

- **Easy Integration** - Embed the API onto your website using an iFrame. No complicated code or scripts required.
- **Your Branding, Your Clients** - The client stays on your website while shopping. The location of the API and the content around it are in your control.
- **Robust, Flexible & Dynamic** - The content within the API is automatically updated as we make product changes. All quotes created in the API are mirrored in TIPS.
- **More Than a "Buy Now" Link** - From the first interaction to the final sale, you maintain contact with the client providing advice and answering their questions.

THREE WORKFLOWS

1. **Client Goes to Your Website** – Client completes the interactive, electronic form. When they are ready to buy, we message you. You can open the quote in the API or TIPS.
2. **Send Your Client a Partially Completed Quote** – You start a new quote in the API by entering minimal information. Send the quote to your client for them to review, complete the application, and browse the coverages. You will receive a copy of the partial quote for your records and tracking. You will be notified when the client is ready to buy.
3. **Send Your Client a Blank Quote** – Go to your API and send your client a blank quote. Your client receives an email with a link taking them directly to your API.
